Δ DELTA FILINGS

Corporate Governance Intelligence Platform

Business Requirements Document

Version 3.0 — May 2026

Prepared by: Delta Filings Product Team

Reflects the production platform live at https://delta-filings.up.railway.app

Document Control

Revision History

Version	Date	Author	Summary of Changes
1.0	2026-02-18	Product Team	Initial release — v1 platform on Flask + SQLite.
2.0	2026-04-23	Product Team	Aspirational re-architecture spec (FastAPI + Postgres + Next.js).
3.0	2026-05-27	Product Team	Re-baselined to actual production state on Railway: Flask + SQLite stack, Razorpay billing live, Draft Engine, Industry Intel, Telegram alerts, SEBI enforcement scraper, MCA director history, XBRL parsing, Governance reports, dark-mode + animation UX refresh.

Approvers

Name	Role	Organisation	Signed On
Prakhar Singh	Product Owner	Delta Filings	2026-05-27
Engineering Lead	Technical Sign-off	Delta Filings	2026-05-27
Compliance Advisor	Domain Sign-off	Delta Filings	2026-05-27

Distribution List

Recipient	Role	Access Level
Executive Sponsor	Strategic oversight	Full
Engineering Team	Implementation	Full
QA Team	Validation	Full
External Auditor	Compliance review	Read-only

Table of Contents

1. Executive Summary

Delta Filings is a corporate governance intelligence platform for Indian listed companies. It aggregates statutory disclosures from NSE, MCA and SEBI; layers AI-generated summaries, draft-letter generation and compliance tracking on top; and surfaces the result through a unified web application that any investor, compliance officer, analyst or legal professional can use without specialised training.

This Business Requirements Document (v3) re-baselines the product against the platform that is actually live in production at https://delta-filings.up.railway.app. It documents nine production modules — Dashboard, Filings, Filing Diff, Draft Engine, Stock Prices, Price Alerts, Compliance, Governance & XBRL, DIN Search and Industry Intelligence — along with the Razorpay-backed access model, Supabase-managed authentication, Gemini-powered AI workflows and Telegram alert delivery that support them.

v3 also formalises the recent user-experience refresh, in which the platform's dark mode was rebuilt to a near-black, low-blue palette, the Tailwind-based light surfaces were systematically overridden for dark contexts, and a global animation pass introduced staggered card entrances, hover lifts, frosted-glass headers, smooth theme transitions and a reduced-motion fallback.

2. Business Context and Problem Statement

2.1 The Problem

Indian listed companies generate thousands of regulatory disclosures every week across NSE, BSE and MCA. The data is fragmented across multiple portals, served as inconsistent PDFs, and offers no structured way to track directors across companies, monitor compliance obligations, or detect material changes between successive filings. Investors, compliance officers, analysts and legal teams routinely spend hours assembling information that should take minutes.

2.2 Who Is Affected

- Retail and institutional investors tracking corporate events.
- Compliance officers managing LODR, Companies Act and SEBI obligations.
- Equity research analysts preparing coverage notes and governance reviews.
- Legal and audit teams conducting director and company due-diligence.
- Corporate secretaries who need to draft routine SEBI letters efficiently.

2.3 Current State (May 2026)

Delta Filings v3 is in paid production. The platform tracks 16 industries, ingests NSE corporate filings on demand, generates AI summaries, supports an end-to-end SEBI letter drafting workflow with team collaboration, runs a 60-second price-alert poller during IST market hours, and delivers alerts to users via

Telegram. Access is gated behind a single ₹4,999 annual fee charged through Razorpay, with a referral-code fallback for invited users.

2.4 Opportunity

A structured, real-time governance intelligence layer for Indian capital markets remains under-served. Delta Filings has now demonstrated commercial viability at the individual-professional price point and is positioned to expand into team / enterprise tiers, additional asset classes, and adjacent regulated workflows (audit, internal compliance, M&A diligence).

3. Business Objectives and Success Metrics

3.1 Strategic Objectives

1. Establish Delta Filings as the default research surface for Indian corporate filings.
2. Reduce time-to-insight on any listed company from hours to minutes.
3. Build a defensible data layer combining filings, directors, compliance and enforcement that compounds over time.
4. Convert the existing single-user ₹4,999 tier into a scalable revenue base, with team / enterprise tiers introduced when justified by demand.

3.2 Key Performance Indicators

KPI	Definition	v3 Target	Cadence
Monthly Active Users	Unique signed-in users per month	1,500	Monthly
Paid Conversion	Free signups converting to paid in quarter	≥ 6%	Quarterly
Filings Freshness	Median lag between NSE publication and ingestion	≤ 10 min	Weekly
Draft Time-to-Send	Median time from "new draft" to "export PDF"	≤ 8 min	Monthly
Alert Delivery (p95)	Time from threshold trigger to Telegram receipt	≤ 90 s	Continuous
Compliance Coverage	% of watchlisted companies with refreshed obligations	≥ 95%	Weekly

KPI	Definition	v3 Target	Cadence
Week-4 Retention	% of new paid users active in week 4	≥ 50%	Monthly

4. Scope

4.1 In Scope (v3)

- On-demand ingestion of NSE corporate filings and announcements per watchlisted company.
- AI-generated filing summaries and tag classification (Gemini 2.5 Flash and Pro).
- Filing-to-filing diff engine (line-level, inline and side-by-side views).
- SEBI Letter Draft Engine — example-driven AI drafting, tone matching, PDF and DOCX export, with team collaboration via invite links.
- DIN Search across filings text, governance XBRL, and MCA scraped director history.
- Governance reports module — NSE Integrated Filing system fetch, XBRL parse, two-report compare.
- Compliance OS — SEBI/LODR/Companies Act obligations catalogue, due dates, scoring, SEBI enforcement scraping.
- Stock Prices — live quotes, 3% movers, pre-open data, sector view.
- Price Alerts — user-defined threshold alerts delivered to Telegram and the browser, evaluated every 60 s during IST market hours.
- Industry Intelligence — curated profiles for 16 industries with live Google News and Gemini-authored weekly briefings.
- Watchlists, account management, Razorpay billing and referral redemption.
- Light and dark themes with a complete dark palette, gradient overrides, and a global animation pass.

4.2 Out of Scope (v3)

- Retail trading, order placement or brokerage integration.
- Personalised investment advisory or tax advice.
- Coverage of unlisted private companies beyond MCA director data.
- Non-Indian capital markets.
- Native mobile applications (web-responsive only in v3).
- Real-time tick-level price streaming (60 s polling cadence is the design choice).

4.3 Assumptions

- NSE, MCA and SEBI continue to expose their current public data channels.
- Supabase remains the identity provider; Razorpay remains the payment provider; Gemini remains available.
- Telegram Bot API remains free for the volumes Delta Filings will produce.
- Users have modern evergreen browsers (Chrome, Edge, Safari, Firefox — latest two versions).

4.4 Constraints

- No storage of card numbers, bank credentials or government IDs.
- All filings content must be attributed to its original NSE source URL.
- Single-instance Flask/Gunicorn deployment on Railway; horizontal scaling out of scope for v3.
- SQLite (WAL mode) is the system of record; database growth is expected to remain comfortably within single-host limits for the v3 user base.
- AI-generated content must always carry a visible "machine-generated" label.

5. Stakeholders

The table below captures the stakeholders involved in Delta Filings v3, their primary interests and the nature of their engagement.

Stakeholder	Interest	Engagement
Product Owner	Overall outcome, prioritisation, release decisions	Decision-maker
Engineering Lead	Architecture, delivery, reliability	Decision-maker
Compliance Advisor	Accuracy of regulatory content	Reviewer
Design Lead	Usability, dark-mode contrast, motion	Contributor
QA Lead	Functional and regression validation	Reviewer
Paid Customers	Direct usage feedback	Contributor
Executive Sponsor	Strategic fit and investment	Informed

6. User Personas

6.1 Arjun — Equity Research Analyst

- Covers 25–40 mid-cap stocks across chemicals, pharma and FMCG.
- Needs: filing summaries within minutes of publication, side-by-side compare of two filings, sector-level briefings.
- Pain today: juggles NSE, MCA and SEBI tabs; manually compares results between filings.

6.2 Meera — Compliance Officer

- Accountable for LODR and Companies Act filings for a listed company.
- Needs: obligation tracker with due dates, SEBI enforcement watch on her own and peer companies, audit-ready drafts.
- Pain today: spreadsheets, email threads, no single source of truth.

6.3 Raghav — Retail Investor / Finfluencer

- Manages a personal portfolio and publishes a weekly newsletter.
- Needs: price-movement alerts to Telegram, AI explanation of why a stock moved, industry briefings.
- Pain today: information overload; struggles to separate signal from noise.

6.4 Priya — Legal and Audit Professional

- Performs director-level due-diligence and prepares SEBI correspondence.
- Needs: cross-company director associations, MCA history, fast SEBI letter drafting and team review.
- Pain today: MCA portal usability is poor; letter drafting requires re-keying boilerplate.

7. Business Requirements

Business requirements describe what the platform must do, irrespective of implementation. Each requirement has an identifier (BR-###) that maps forward to the Functional Requirements Document (FRD) v3.

7.1 Filings, Diffs and Summaries

ID	Requirement	Priority
BR-001	Users can browse the latest filings across their watchlist on a unified dashboard.	Must
BR-002	Users can open any company's full filing history, paginated.	Must

ID	Requirement	Priority
BR-003	Each filing has an AI-generated summary, on demand if not already cached.	Must
BR-004	Each filing carries one or more tags (Board, Compliance, Financial, Leadership, etc.).	Must
BR-005	Users can diff a filing against the previous matching filing (inline and side-by-side).	Must
BR-006	Users can search a company's filings by free text and tag.	Should
BR-007	Users can extract and view embedded XBRL where the source PDF contains it.	Should

7.2 SEBI Letter Draft Engine

ID	Requirement	Priority
BR-010	Users can select from 20+ pre-defined SEBI filing types (periodic and event-based).	Must
BR-011	The platform pulls past examples of the chosen filing type for the target company.	Must
BR-012	Users can learn a company's tone from its past filings before drafting.	Must
BR-013	Users can AI-fill placeholders using public knowledge about the company.	Must
BR-014	Users can improve a draft via polish, tone-match, formal-rewrite or custom instructions.	Must
BR-015	Users can export a finished draft to PDF and to DOCX.	Must
BR-016	Users can save drafts, list past drafts and resume them.	Must
BR-017	Users can invite collaborators to a draft via shareable, revocable links.	Should
BR-018	Owners can change collaborator roles (editor / viewer) and remove collaborators.	Should

7.3 Directors, Governance and DIN

ID	Requirement	Priority
BR-020	Users can search directors by name or DIN across filings and governance reports.	Must
BR-021	Director results include MCA-scraped history of active and past companies.	Must
BR-022	Users can list a company's governance reports and inspect parsed XBRL.	Must
BR-023	Users can compare two governance reports for a company side-by-side.	Should

7.4 Compliance and Enforcement

ID	Requirement	Priority
BR-030	The platform tracks the standard SEBI / LODR / Companies Act obligations for each watchlisted company.	Must
BR-031	Users see upcoming, overdue and completed obligations with due dates.	Must
BR-032	The platform scrapes SEBI public enforcement orders and matches them to watchlisted companies with a confidence rating.	Must
BR-033	Each company surfaces a compliance score and health tag.	Should
BR-034	Users can manually refresh compliance data per company or for the whole watchlist.	Should

7.5 Prices, Alerts and Intel

ID	Requirement	Priority
BR-040	The platform shows live quotes for all watchlisted companies.	Must
BR-041	The platform highlights movers exceeding 3% (intra-day) and 1.5% (pre-open).	Must
BR-042	Users can create custom price alerts (threshold %, direction, enabled flag).	Must
BR-043	Custom alerts fire to Telegram (if linked) and to the browser.	Must
BR-044	Users can request a deep "price intel" explanation combining news,	Should

ID	Requirement	Priority
	Reddit and recent filings.	
BR-045	Users can read a Gemini-authored weekly briefing for their industry.	Should

7.6 Watchlists, Accounts and Billing

ID	Requirement	Priority
BR-050	Users can add or remove companies from a watchlist.	Must
BR-051	Switching industry re-populates the watchlist and backfills data for the new set.	Must
BR-052	Users register and sign in via email and password through Supabase.	Must
BR-053	New users are onboarded by capturing industry, company and designation before checkout.	Must
BR-054	Access to all paid features is gated by a single ₹4,999 annual fee paid via Razorpay.	Must
BR-055	Users may redeem a valid referral code in lieu of payment.	Must
BR-056	Users can link and unlink a Telegram account for alert delivery.	Should

7.7 Experience, Theme and Motion

ID	Requirement	Priority
BR-060	The application provides a light theme and a dark theme.	Must
BR-061	The dark theme uses a near-black, low-blue palette with consistent contrast across all surfaces, tags, badges, gradients and modals.	Must
BR-062	Theme choice persists across visits via local storage.	Must
BR-063	Interactive surfaces (cards, buttons, nav, theme toggle) animate with consistent timing.	Should
BR-064	The interface respects the user's prefers-reduced-motion setting.	Must

8. Summary of Functional Requirements

Functional requirements are specified in detail in the companion Functional Requirements Document v3. The table below summarises the modules and their identifier prefixes.

Module	FRD Prefix	Coverage
Dashboard	FR-D	Calendar grid, recent activity, sector pulse, top tags, stats.
Filings & Announcements	FR-A	Per-company filing list, search, tag filter, on-demand backfill.
Filing Diff	FR-FD	Inline and side-by-side diff of two filings.
Draft Engine	FR-DR	SEBI letter wizard, AI drafting, exports, team collaboration.
DIN Search	FR-N	Search across filings, XBRL and MCA history.
Governance & XBRL	FR-G	List, parse and compare governance reports.
Compliance OS	FR-M	Obligations catalogue, scores, refresh, SEBI enforcement watch.
Stock Prices	FR-P	Live quotes, movers, pre-open, sector data.
Price Alerts	FR-AL	Custom alerts, Telegram delivery, 60 s poller.
Industry Intelligence	FR-I	16 industry profiles, news and weekly briefings.
Watchlist	FR-W	Add, remove, industry switch.
Authentication & Onboarding	FR-U	Signup, signin, onboarding, profile.
Payments & Access	FR-PY	Razorpay billing, referral redemption.
Experience & Theme	FR-UX	Dark mode, animations, accessibility.

9. Non-Functional Requirements

9.1 Performance

Metric	Target
Dashboard time-to-interactive (p95)	< 3.0 s on broadband
Watchlist API latency (p95)	< 400 ms
Filing summary generation (Gemini Flash)	< 12 s end-to-end
Price alert dispatch latency (threshold to Telegram)	< 90 s at p95
Concurrent paid users (v3 envelope)	300

9.2 Availability and Reliability

- Platform uptime target: 99% monthly during IST market hours.
- Background pollers use a database-backed lease so only one Gunicorn worker performs each cycle.
- Filings cache is refreshed lazily on company view if older than 6 hours.
- Daily backup of the SQLite WAL database, retained for 14 days.

9.3 Security

- All external traffic served over TLS by Railway.
- Secrets supplied via Railway environment variables — never committed.
- Supabase issues JWTs; Flask validates session state on every request.
- Razorpay payment signatures verified via HMAC-SHA256 before marking a user paid.
- All draft mutations are scoped to the owning user_id at the database query layer.

9.4 Privacy and Data Protection

- Personal data limited to email, name, organisation, designation, industry, paid flag.
- No storage of card numbers, bank credentials or government IDs.
- Telegram chat IDs stored only after explicit Login Widget verification.
- Data subject access and deletion honoured within 30 days of request.

9.5 Accessibility

- WCAG 2.1 AA is the baseline for primary surfaces (dashboard, filings, draft editor).

- All interactive elements reachable via keyboard.
- Dark mode contrast verified at design review; all tag colours retested for AA against #141414 surface.
- Animations honour prefers-reduced-motion, collapsing to near-zero durations.

9.6 Observability

- Gunicorn access and error logs streamed to Railway.
- Background poller emits structured lines tagged [ALERT-POLLER] for filtering.
- Razorpay webhooks logged with order_id for reconciliation.

10. Solution Overview

Delta Filings v3 is a single-process Flask application deployed on Railway, fronted by Gunicorn. It uses SQLite (WAL mode) as the system of record, integrates with Supabase for authentication, Razorpay for billing, Gemini for AI workflows, Telegram for alert delivery, and live HTTP endpoints from NSE, MCA, SEBI and Google News for data. The frontend is Jinja2 templates with Tailwind CSS, custom CSS for the design system, and vanilla JavaScript.

Component	Technology	Purpose
Web framework	Flask 3 + Jinja2	HTTP routing and server-side rendering.
Application server	Gunicorn (2 workers, 120 s timeout)	Production server on Railway.
Database	SQLite (WAL mode)	Filings, watchlist, drafts, compliance, alerts, payments.
Auth provider	Supabase (publishable + admin keys)	Email signup/signin, JWT sessions, user metadata.
Payments	Razorpay (₹4,999 access fee)	Order creation and HMAC-verified payments.
AI	Google Gemini (2.5 Flash + Pro)	Summaries, drafting, tone matching, briefings.
Alerts	Telegram Bot API	Custom price-alert delivery.
Data sources	NSE, MCA (via ZaubaCorp / Tofler), SEBI, Google News, Reddit	Filings, directors, enforcement, sector news.

Component	Technology	Purpose
Frontend styling	Tailwind CSS + custom design system (styles.css)	Light + dark themes, animations.
Hosting	Railway (Procfile-driven)	Build via nixpacks; deploy via railway up.

11. Data Requirements

11.1 Primary Entities (SQLite)

- filings — the corporate filing record (company, title, description, date, pdf_link, raw_text, summary, tags, has_xbrl).
- snapshots — list of filing IDs captured at a point in time for diff detection.
- watchlist — (user_id, symbol) with display name and timestamp.
- settings — key-value (Gemini key, model choice).
- user_telegram — (user_id, chat_id, first_name, username).
- referral_codes / referral_redemptions — code registry and per-user redemption record.
- user_payments — Razorpay payment / order IDs, amount, method, timestamp.
- user_drafts — SEBI letter draft owned by a user.
- draft_teams / draft_invites — collaborator roles and shareable invite tokens.
- price_alerts — custom alert with threshold, direction, cooldown and last_fired_at.
- compliance_obligations — SEBI mandate tracking per company.
- enforcement_orders — SEBI public order with confidence rating.
- cron_meta — database-backed lease for background pollers.
- filings_meta — per-symbol last_fetched_at and count.

11.2 Data Sources

- NSE corporate announcements and integrated filing system.
- MCA director records (via ZaubaCorp / Tofler scraping, cached 30 days).
- SEBI public enforcement orders (scraped across five order categories).
- Google News RSS (per industry / company).
- Reddit JSON search endpoint (retail sentiment).
- Razorpay (payment data).
- Supabase (user identity and metadata).

11.3 Data Quality Targets

- Filings ingestion completeness: ≥ 95% of NSE filings for watchlisted companies.
- Filing tag accuracy: ≥ 90% against weekly spot-check sample.
- Enforcement match confidence: ≥ 70% of matched orders rated 'high' confidence.
- Director association freshness: refreshed at least every 30 days for queried DINs.

11.4 Data Retention

- Filings: retained indefinitely; only summary regenerated on user request.
- Drafts: retained until the owner deletes them.
- Background poller logs: retained 14 days via Railway.
- Payment records: retained indefinitely for audit.
- Deleted user data: purged within 30 days of request.

12. Regulatory and Compliance Considerations

- All filings content links back to the originating NSE URL.
- The platform does not claim to replace statutory filing channels and clearly identifies AI-generated content.
- Draft Engine outputs are explicitly machine-generated; users are responsible for legal review before submission.
- Razorpay handles all card / UPI data; Delta Filings never sees raw payment credentials.
- User data handling follows the expectations of the Digital Personal Data Protection Act, 2023.
- Terms of Service and Privacy Policy are reviewed annually.

13. Risks and Mitigations

ID	Risk	Impact	Likelihood	Mitigation
R-01	NSE API layout changes break ingestion or symbol search.	High	Medium	Per-source abstraction in fetch.py and stock_prices.py; sample-data fallback; 24-hour fix SLO.
R-02	Gemini outage or quota exhaustion blocks summaries and drafting.	High	Low	Per-user API key support; heuristic-only tag fallback; on-demand re-summarise.
R-03	Telegram bot token	Mediu	Low	Graceful per-user error handling;

ID	Risk	Impact	Likelihood	Mitigation
	revoked or rate-limited.	m		in-browser alert remains as backup channel.
R-04	SQLite contention as user base grows.	Mediu m	Medium	WAL mode; query indexing; planned migration to Postgres at ≥ 1,000 paid users.
R-05	Razorpay webhook miss or signature mismatch.	High	Low	Signature verified on the synchronous /api/payment/verify endpoint before user is marked paid.
R-06	Dark-mode contrast regressions after future template changes.	Mediu m	Medium	Centralised dark overrides in styles.css; design review checklist enforces AA contrast.
R-07	Railway region or platform outage.	High	Low	Cached static surfaces; documented manual restore from SQLite backup.

14. Assumptions and Dependencies

14.1 External Dependencies

- Supabase — identity and user metadata.
- Razorpay — payment processing.
- Google Gemini — summarisation, drafting, briefings.
- Telegram Bot API — alert delivery.
- NSE, MCA, SEBI public data channels.
- Google News RSS, Reddit JSON — supplementary intel.
- Railway — hosting, build, runtime, logs.

14.2 Internal Dependencies

- Design system (styles.css) maintains parity between light and dark themes for any new surface.
- Editorial review of curated industry profiles before any addition / change.
- Legal review of Terms of Service and Privacy Policy at least annually.

15. Release Plan and Roadmap

15.1 Releases Delivered

Release	Date	Highlights
v1	2026-02	Dashboard, filings list, AI summaries, diff engine, DIN search, Supabase auth.
v1.5	2026-03	Draft Engine MVP, watchlist persistence, compliance obligations catalogue.
v2 (BRD only)	2026-04	Aspirational spec for a FastAPI + Postgres + Next.js re-architecture (not adopted).
v2.5	2026-04	Razorpay billing, referral system, onboarding flow.
v2.8	2026-05	Industry Intelligence, SEBI enforcement scraper, price intel, Telegram alerts, governance compare.
v3	2026-05	UX refresh — near-black dark palette, gradient overrides for Chemicals Pulse and similar cards, icon-tile tint redesign, animation pass (fadeInUp, hover lifts, frosted page header, theme-toggle rotation, button glow), focused inputs, reduced-motion fallback.

15.2 Forward-Looking Roadmap

Milestone	Target Date	Scope
v3.1	2026-07	BSE ingestion parity, more industries, draft template library.
v3.2	2026-09	Team tier (multi-seat), shared watchlists, SSO option.
v3.5	2026-12	Postgres migration; daemon-based background workers; queue.
v4	2027-02	Public API and partner integrations.

16. Acceptance Criteria

A release is considered acceptable when all of the following are demonstrable on production for two consecutive weeks without regression:

5. All 'Must' business requirements pass their corresponding FRD acceptance tests.
6. Performance targets in Section 9.1 are met under representative load.

7. Dark mode passes a contrast and consistency audit across every primary route.
8. Animation pass exhibits no jank on a mid-tier laptop and is fully neutralised under prefers-reduced-motion.
9. Background poller successfully fires synthetic Telegram alerts end-to-end.
10. Razorpay test mode and live mode both succeed in marking a user paid and unlocking gated routes.
11. No High-severity security findings remain open.

Appendix A — Glossary

Term	Definition
BRD	Business Requirements Document — this document.
BSE	Bombay Stock Exchange.
CIN	Corporate Identification Number issued by MCA.
DIN	Director Identification Number issued by MCA.
DPDP Act	Digital Personal Data Protection Act, 2023 (India).
FRD	Functional Requirements Document — companion document to this BRD.
Gemini	Google's family of large language models used for summaries and drafting.
IST	Indian Standard Time (UTC+05:30).
LODR	SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015.
MCA	Ministry of Corporate Affairs, Government of India.
MoSCoW	Prioritisation convention — Must, Should, Could, Won't.
NSE	National Stock Exchange of India.
Razorpay	Indian payment gateway used by Delta Filings to charge access fees.
SEBI	Securities and Exchange Board of India.
SLO	Service Level Objective — target level for a reliability metric.
Supabase	Identity and user-metadata provider used by Delta Filings.
Telegram	Messaging service used to deliver price alerts to linked users.

Term	Definition
TLS	Transport Layer Security, the cryptographic protocol for HTTPS.
WAL	Write-Ahead Logging — SQLite journal mode used in production.
WCAG	Web Content Accessibility Guidelines.
XBRL	eXtensible Business Reporting Language — structured filings format.

Appendix B — UX Refresh (v3) Changelog

This appendix consolidates the user-experience changes shipped as part of the v3 refresh in May 2026.

B.1 Dark Mode Palette

- Surface colours moved off slate-blue ('0f172a' / '020617') to a near-black neutral set: body #0a0a0a, surface #00#141414, secondary #1c1c1c, border #262626.
- Text neutrals re-balanced (#f5f5f5 / #d4d4d4 / #a3a3a3) for cleaner grayscale.
- Tailwind utility overrides extended to bg-white, bg-gray-*, bg-slate-*, text-gray-*, border-gray-*, ring-gray-*, divide-gray-*.

B.2 Surface Treatments

- Icon tiles (bg-*-100) re-coloured to tinted darks with a 1px inset ring for definition.
- Decorative gradients (e.g. Chemicals Pulse — from-indigo-50 via-white to-purple-50) replaced with a subtle indigo → #141414 → purple gradient in dark mode.
- Modals, diff views, scrollbars, inputs and the spinner all received dark variants.

B.3 Animation and Motion

- Cards fade-in-and-rise on load (fadeInUp, 0.4 s cubic-bezier); feature cards staggered.
- Feature and stat cards lift on hover with a subtle indigo halo in dark mode.
- Primary buttons use a gradient + glow in dark mode and lift on hover.
- Theme toggle icons rotate gently on hover.
- Active sidebar nav item gains an indigo gradient bar and glow.
- Page header receives a frosted backdrop-blur in dark mode for depth.
- Smooth 0.25 s colour transitions across surfaces so theme toggling no longer snaps.

B.4 Inputs and Focus

- Dark input surfaces #1c1c1c with #2a2a2a border and #f5f5f5 text.

- Indigo focus ring (3px, 18% opacity) for inputs, textareas and selects.
- Global :focus-visible outline (2px indigo, 60% opacity) for buttons and links.

B.5 Accessibility

- All animations honour the user's prefers-reduced-motion setting and reduce to near-zero durations.
- Dark-mode tag and badge colours re-checked for AA contrast against the #141414 surface.

B.6 Header Cleanup

- Removed the redundant company ticker chips from the dashboard top bar.
- Theme toggle moved alongside the user profile cluster for a single, cohesive header strip.
