Delta Filings

AI governance intelligence infrastructure for India's listed companies.

TEAM DELTA FILINGS · SOLO BUILDER: PRAKHAR SINGH

Track: AI in Governance, Risk & Compliance · BFSI: Capital Markets / RegTech

Focus: SEBI LODR & MCA compliance for listed issuers

Stage: ▪ **MVP — live prototype** Commitment: ▪ **Full-time**

1 Problem

- Who: Company Secretaries and compliance teams at 5,000+ NSE/BSE listed issuers
- Today: filings read by hand, Excel deadline trackers, ad-hoc legal opinions
- Thousands of filings a quarter, and the disclosure load rises every year
- One missed LODR obligation → penalty, exchange notice, board exposure

Access to filings is free. Interpretation isn't.

2 Solution

- Three AI agents run the CS workflow end to end: Monitor → Intelligence → Action
- Detects board, director, committee and corporate-action changes inside the filing
- Maps each change to SEBI LODR / MCA obligations, deadlines and required forms
- Generates the disclosure draft, board note and checklist — a human approves and e-signs

Delta Signal: what changed · why it matters · what to do next.

3 Validation

- Conversations with practising Company Secretaries: the job is interpretation and drafting, not search
- Repeat ask — "tell me what changed since the last report, and give me the draft"
- Built from the regulation: 305-obligation LODR/MCA library, 86 SEBI enforcement actions parsed
- Live prototype running on real NSE/BSE data — full demo in Round 2

Every output traced to the filing it came from.

4 Regulatory Requirements (Domestic / IFSC)

- In scope: SEBI (LODR, PIT, SAST) · MCA / ROC · NSE & BSE listing ops · IFSCA for IFSC-listed issuers and GIFT-domiciled funds
- Delta is decision support — it drafts and evidences; an authorised signatory approves and files. No regulated activity on the issuer's behalf.
- Risk — accuracy: deterministic rules gate detection, model output is quoted from the source filing, human sign-off is mandatory
- Risk — data: public disclosures only, immutable audit log per action, India-resident deployment for IFSC data

5 Team–Market Fit

- Prakhar Singh — solo builder. Designed and shipped the whole platform: ingestion, multi-agent AI, compliance engine, drafting and e-sign.
- Domain learned from the source: 6,276 real filings parsed, obligation model written from the regulation text itself
- Biggest achievement: a working end-to-end governance workflow — detect → assess → draft → approve → audit — built and deployed alone

RUNNING TODAY

6,276	305	53	124	100%
filings parsed	LODR / MCA obligations tracked	governance events detected	action documents generated	evidence-linked & audit-logged

Why GIFT IFIH?

Pilots with listed issuers and IFSC entities, regulatory guidance from SEBI/IFSCA-facing mentors to harden the compliance engine, and partnerships with CS firms, registrars and exchanges — building India's governance intelligence layer inside the ecosystem that sets the standard.
