Delta Filings

AI governance intelligence infrastructure for India's listed companies.

TEAM DELTA FILINGS · SOLO BUILDER: PRAKHAR SINGH

Track: AI in Governance, Risk & Compliance · BFSI: Capital Markets / RegTech

Focus: SEBI LODR & MCA compliance for listed issuers

Stage: ▪ **MVP — live prototype** Commitment: ▪ **Full-time**

1 Problem

- Who: Company Secretaries and compliance teams at 5,000+ NSE/BSE listed issuers
- Today: thousands of filings a quarter read by hand, deadlines tracked in Excel, ad-hoc legal opinions
- One missed LODR obligation → penalty, exchange notice and board-level exposure

Access to filings is free. Interpretation isn't.

2 Solution

- Three AI agents run the CS workflow: Monitor detects → Intelligence assesses → Action drafts
- Board, director, committee and corporate-action changes mapped to SEBI LODR / MCA obligations and deadlines
- Ships the disclosure draft, board note and checklist — a human approves and e-signs

Delta Signal: what changed · why it matters · what to do next.

3 Validation

- Practising Company Secretaries: the work is interpretation and drafting, not search
- Repeat ask — "tell me what changed since the last report, and give me the draft"
- Built from the regulation: 305-obligation LODR/MCA library, 86 SEBI enforcement actions parsed

Live on real NSE/BSE data — full demo in Round 2.

4 Regulatory Requirements (Domestic / IFSC)

- In scope: SEBI (LODR, PIT, SAST) · MCA / ROC · NSE & BSE listing ops · IFSCA for IFSC-listed issuers and GIFT-domiciled funds
- Delta is decision support — it drafts and evidences; an authorised signatory approves and files. No regulated activity on the issuer's behalf.
- Risk & mitigation: deterministic rules gate detection, every model output quotes its source filing, human sign-off is mandatory, public data only

Compliance-grade by construction: evidence → approval → immutable audit log.

5 Team–Market Fit

- Prakhar Singh — solo builder: ingestion, multi-agent AI, compliance engine, drafting and e-sign, all shipped by one person
- Domain learned at the source: 6,276 real filings parsed, obligation model written from the regulation text itself
- Biggest achievement: a live end-to-end governance workflow — detect → assess → draft → approve → audit

Full-stack + AI + regtech in one builder = ship speed.

RUNNING TODAY

6,276	305	53	124	100%
filings parsed	LODR / MCA obligations tracked	governance events detected	action documents generated	evidence-linked & audit-logged

Why GIFT IFIH?

Pilots with listed issuers and IFSC entities, regulatory guidance from SEBI/IFSCA-facing mentors to harden the compliance engine, and partnerships with CS firms, registrars and exchanges — building India's governance intelligence layer inside the ecosystem that sets the standard.
